🧠 Skills

Languages: TypeScript, JavaScript, SQL

Frameworks: React, Next.js, Node.js, Express, GraphQL, React Query, Tailwind CSS

Databases: PostgreSQL, MySQL, MongoDB, Redis, OpenSearch

Cloud & Infrastructure: AWS, Cloudflare, Docker, Coolify, GitHub Actions, CI/CD

Tools: Prisma, Drizzle, Sequelize, Jest, Playwright, Git, xState

AI & Automation: LLM Integrations, OpenAI API, Prompt Engineering, AI Workflow Automation, OCR, n8n, Make

📁 Work Experience

Hero Pages (Remote) 📄, Senior Software Engineer (Contract) 2026/02 – 2026/07 | Germany

- Joined as an early engineer to **build the core infrastructure** for an AI-powered website publishing SaaS platform using Next.js and Node.js.
- Owned the design and implementation of the Cloudflare-based hosting platform using Workers, KV, R2 and Wrangler, enabling **automated website hosting, DNS provisioning and custom domain management** at scale.
- **Owned the end-to-end deployment platform** for customer websites, designing Cloudflare infrastructure, automated provisioning, deployment pipelines and production hosting.
- Developed **backend automation services** to support website generation workflows, website research and content extraction, accelerating website creation through reusable automation pipelines.

Wednesday Solutions

Software Engineer II 2024/04 – 2026/02 | Pune, India

- Developed an **AI-powered content marketing SaaS platform** for financial advisors, owning end-to-end product development across AI workflows, content discovery, customer onboarding, subscriptions and workflow automation.
- Designed and owned a **cross-platform AI content discovery pipeline** that continuously ingested content from Instagram, YouTube and TikTok using Apify and Supabase Functions, generated searchable transcripts with AssemblyAI, and enabled users to discover high-performing content through engagement-based ranking and filtering.
- Designed and **built a multi-tenant workspace** allowing customers to manage multiple independent business profiles under a single account, integrated with Stripe to support subscription upgrades and profile-based billing.
- Designed and implemented a configurable **referral and rewards platform** integrated with Stripe subscriptions, automating credit allocation and supporting flexible reward strategies without code changes.
- **Designed and implemented AI orchestration workflows** using Tavily, OpenAI and n8n to research, validate, enrich and structure business information from customer websites, automating customer onboarding through resilient multi-step AI pipelines.
- Built AI-powered **document processing pipelines** that combined OCR and OpenAI to transform unstructured documents into structured business data, significantly reducing manual processing and improving downstream automation.
- **Enhanced the subscription platform** by implementing pricing management, plan upgrades/downgrades, AI token allocation and real-time workflow notifications using Supabase Realtime, improving customer visibility into long-running AI operations.
- Delivered full-stack product features for a **large-scale enterprise FinTech platform**, improving analytics capabilities, modernizing customer-facing experiences by migrating from CSR to SSG, and resolving complex production issues.
- Designed and **optimized OpenSearch-based analytics** and reporting workflows by extending search queries, diagnosing production search issues, and improving reporting accuracy and reliability.

Software Engineer 2022/01 – 2024/04 | Pune, India

- Expanded a veterinary SaaS platform from a **single-country deployment to a multi-tenant product** supporting Singapore, Indonesia and Hong Kong through localization, multilingual support and country-specific business rules.
- Designed and **Owned the development of digital dispensary workflows**, enabling veterinarians to manage clinic inventory, prescribe medicines from either the centralized platform or their own clinics, and support bulk inventory management through Excel imports.
- Improved **appointment scheduling reliability** by redesigning veterinarian availability management, eliminating unnecessary API operations and resolving complex timezone-related scheduling issues.
- Integrated **Zoom SDK, Stripe and Midtrans** to enable virtual consultations and regional payment processing, while **integrating SendGrid and Zoko** for automated email and WhatsApp communication workflows.
- Enhanced **post-appointment prescription and medication management** workflows, improving the overall consultation experience for veterinarians and pet owners.

eCare Infoway LLP, Frontend Developer 2021/03 – 2021/09 | Vadodara, India

- Developed responsive web applications and custom business websites using JavaScript, PHP and WordPress for multiple clients.

🎓 Education

Bachelors of Engineering in Mechanical

2014 – 2017

SVMIT, Bharuch - GTU
